

# PHP79NQ08LT-VB Datasheet N-Channel 80 V (D-S) MOSFET

| PRODUCT SUMMARY                       |        |    |  |  |
|---------------------------------------|--------|----|--|--|
| V <sub>DS</sub>                       | 80     | V  |  |  |
| $R_{DS(on)} V_{GS} = 10 V$            | 7      | mΩ |  |  |
| $R_{DS(on)}$ $V_{GS} = 4.5 \text{ V}$ | 9      | mΩ |  |  |
| I <sub>D</sub>                        | 100    | Α  |  |  |
| Configuration                         | Single |    |  |  |

#### **FEATURES**

- Trench Power MOSFET
- 100 % R<sub>g</sub> and UIS Tested

#### **APPLICATIONS**

- Primary Side Switching
- Synchronous Rectification
- DC/AC Inverters
- LED Backlighting

| Parameter  | Symbol                            | Limit           | Unit                 |    |  |

#### Notes

- a. Pulse test; pulse width  $\leq 300~\mu s,~duty~cycle \leq 2~\%.$
- b. Guaranteed by design, not subject to production testing.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

#### **Current Derating\***

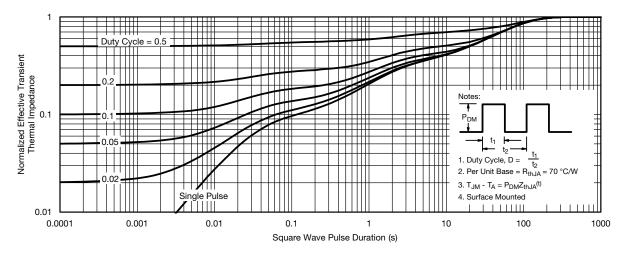

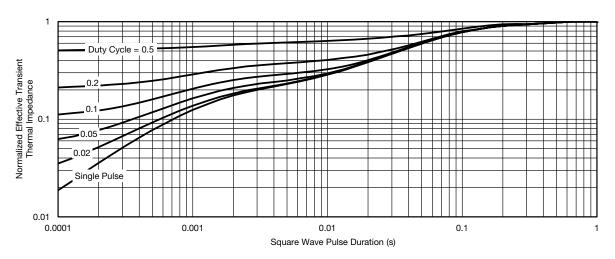

Power, Junction-to-Ambient

<sup>\*</sup> The power dissipation  $P_D$  is based on  $T_{J(max.)} = 150$  °C, using junction-to-case thermal resistance, and is more useful in settling the upper dissipation limit for cases where additional heatsinking is used. It is used to determine the current rating, when this rating falls below the package limit.
